

## Unit 2 – Compulsory assignment: Spring

Modify and finish the JDBC assignment with the following specifications:

1. Implement the `getAll()` and `get()` methods for the DAO Order and OrderItem, using Spring template.
2. Modify the CRUD of customer, using Spring template instead of JDBC:
  - CRUD of customers: When deleting a customer, if it has any order, ask the user, and if so, ***backup the orders into an XML file*** and delete all orders before deleting the customer

Submit the final project with JDBC and Spring. Include the JDBC Customer DAO and the JDBC `getAll()` and `get()` methods for the DAO Order and OrderItem into a folder called ***Deprecated***.
