

Unit 1 – Second compulsory assignment

Based on the Restaurant text files project:

The information of the OrderItems and MenuItems is stored into the orders.xml file. Implement the following functionality:

Compulsory (Up to 7 points):

1. List orders, showing the customer name, and a list of the name, price and quantity of the menu items ordered
2. Add the order items when adding an order
3. Delete orders: If it has any order items, ask the user, and if so, delete the order items before deleting the order
4. Redesign the properties file to an XML format, and read it with the *loadFromXML* method.

If you have time (3 points):

1. Add customers (Id should be autogenerated by the application)
2. Update customers (Anything but the Id can be modified)
3. Update orders (Table number, customer and order items can be modified)
