Hibernate:

0. (1) Load initial data in the database from Mongo, a code that was used in the time of the Great Creator, when there was only one Light. You can find the Gson file within the exam documents.

1. (0.75) Alice's cousin damaged his brain in a battle. To keep him busy, he is in charge of recording weapons of the rebels; to avoid mistakes, the program will delete the insertion immediately.

2. (0.75) Insert a new battle, inserting faction if it does not exist.

3. (0.75) Update the price of a weapon

4. (0.5) Select all factions, and all weapons

5. (0.5) Select the name and the price of all the weapons of a faction.

6. (0.75) Delete the data of a spy and his/her battles, so that if something happens to them, they can deny their existence.

Mongo:

7 (0.75) Select the data of all weapons purchased by a faction from a given date.

8 (0.75) Select all battles reported by a spy, returning battle name and spy name

9 (1) Update the name of a faction, a frequent task when the boss is killed and another takes control.

10 (0.75) Delete all weapons that are not sold

11 (0.75) Delete all data of a faction.
